

Experiment 2

Student Name: Kartik Thakur

Branch:BE-CSE

Semester:ზ

Subject Name: Project Based Learning

in Java with Lab

UID: 22BCS16111 Section/Group: 635/B

Date of Performance: 24/01/2025

Subject Code: 22CSH-359

Aim: The aim of this project is to design and implement a simple inventory
control system for a small video rental store. Define least two classes: a class
Video to model a video and a class VideoStore to model the actual store.

Assume that an object of class Video has the following attributes:

- 1. A title;
- 2. a flag to say whether it is checked out or not;
- 3. An average user rating.

Add instance variables for each of these attributes to the Video class.

In addition, you will need to add methods corresponding to the following:

- 1. being checked out;
- 2. being returned;
- 3. receiving a rating.

The VideoStore class will contain at least an instance variable that references an array of videos (say of length 10). The VideoStore will contain the following methods:

- addVideo(String): add a new video (by title) to the inventory;
- checkOut(String): check out a video (by title);
- 3. returnVideo(String): return a video to the store;
- 4. receiveRating(String, int): take a user's rating for a video; and 5. listInventory(): list the whole inventory of videos in the store.

Discover. Learn. Empower.

- 2. Objective: Create a VideoStoreLauncher class with a main() method which will test the functionality of your other two classes. It should allow the following.
 - 1. Add 3 videos: "The Matrix", "Godfather II", "Star Wars Episode IV: A New Hope".
 - 2. Give several ratings to each video.
 - 3. Rent each video out once and return it.

List the inventory after "Godfather II" has been rented out.

3. Implementation/Code:

```
1. Video Class:-
  class Video {
     private String title;
     private boolean checkedOut;
     private double averageRating;
     private int ratingCount;
     public Video(String title) {
       this.title = title;
       this.checkedOut = false;
       this.averageRating = 0.0;
       this.ratingCount = 0;
     public void checkOut() {
       if (!checkedOut) {
          checkedOut = true;
          System.out.println("Video \"" + title + "\" has been checked out.");
       } else {
          System.out.println("Video \"" + title + "\" is already checked out.");
```

```
public void returnVideo() {
    if (checkedOut) {
       checkedOut = false;
       System.out.println("Video \"" + title + "\" has been returned.");
    } else {
       System.out.println("Video \"" + title + "\" was not checked out.");
  public void receiveRating(int rating) {
    if (rating < 1 || rating > 5) {
       System.out.println("Invalid rating. Please rate between 1 and 5.");
       return;
    averageRating = (averageRating * ratingCount + rating) /
(++ratingCount);
    System.out.println("Received rating of " + rating + " for video \"" + title +
   public String getTitle() {
    return title;
  public boolean isCheckedOut() {
    return checkedOut;
  public double getAverageRating() {
    return averageRating;
```

```
2. VideoStore Class:-
   class VideoStore {
     private Video[] videos;
     private int count;
     public VideoStore(int capacity) {
     videos = new Video[capacity];
     count = 0;
     public void addVideo(String title) {
        if (count < videos.length) {</pre>
           videos[count++] = new Video(title);
           System.out.println("Added video: " + title);
        } else {
           System.out.println("Inventory is full. Cannot add more videos.");
     public void checkOut(String title) {
        Video video = findVideo(title);
        if (video != null) {
          video.checkOut();
        } else {
          System.out.println("Video \"" + title + "\" not found.");
     public void returnVideo(String title) {
        Video video = findVideo(title);
        if (video != null) {
          video.returnVideo();
        } else {
           System.out.println("Video \"" + title + "\" not found.");
```

```
public void receiveRating(String title, int rating) {
     Video video = findVideo(title);
     if (video != null) {
       video.receiveRating(rating);
     } else {
       System.out.println("Video \"" + title + "\" not found.");
  public void listInventory() {
     System.out.println("\nInventory:");
     for (int i = 0; i < count; i++) {
     Video video = videos[i];
     System.out.println("Title: " + video.getTitle() + ", Checked Out: " +
video.isCheckedOut() +
             ", Average Rating: " + video.getAverageRating());
  private Video findVideo(String title) {
     for (int i = 0; i < count; i++) {
       if (videos[i].getTitle().equalsIgnoreCase(title)) {
          return videos[i];
     return null;
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Added video: The Matrix
Added video: Godfather II
Added video: Star Wars Episode IV: A New Hope
Received rating of 5 for video "The Matrix".
Received rating of 4 for video "Godfather II".
Received rating of 5 for video "Star Wars Episode IV: A New Hope".
Video "Godfather II" has been checked out.
Video "Godfather II" has been returned.

Inventory:
Title: The Matrix, Checked Out: false, Average Rating: 5.0
Title: Godfather II, Checked Out: false, Average Rating: 4.0
Title: Star Wars Episode IV: A New Hope, Checked Out: false, Average Rating: 5.0

...Program finished with exit code 0
Press ENTER to exit console.

T. Looming Outoons

Discover. Learn. Empower.

5. Learning Outcomes:

- Designed a functional system to manage video rentals, demonstrating the use of classes and objects in Java.
- Implemented methods for operations like adding videos, renting out, returning, and recording user ratings.
- Applied arrays to store and efficiently manage the video inventory within the store.
- 4. Learned to integrate multiple classes and enable seamless interaction among them in a structured program.
- 5. Strengthened understanding of object-oriented programming concepts like encapsulation and method abstraction.
